Introduction

Telegram Cat is a community-driven coin inspired by the social hype of Memecoin. Telegram's vision for the future is to develop TeleCat, a Decentralized Messaging App that meets Decentralized Banking powered by Blockchain and Artificial Intelligence Technology.

The community-driven coin known as Telegram Cat has been under development since August 10th, 2022, with the aim of becoming a part of a product that will be improved and developed. You can buy more coins and send TGCat coins to other Telegram users. Telegram Cat was made by, for, and on behalf of the Telegram Cat community.

The Telegram Cat community is a growing heat that attracts the attention of internet users. TeleCat will be the first decentralized banking system for Telegram. TeleCat is a Tokenized ecosystem that can be easily accessed through the DApp on our Website. Through the power of Artificial Intelligence, the system will know when to buy and sell in order to predict trends and guarantee profitability for its users.
